Terms and Definitions

A summary of symbols, definitions, and the method of computing rates used in this report are given below.

Definitions

Population	This report contains postcensal estimates for 1982 to 1985, 1987 to 1990, 1992 to 1995, 1997 to 1999 and final census figures for 1981, 1986, 1991, and 1996.
Live Births	Infants born alive, i.e., excluding stillbirths.
Stillbirths	January and February, 1994 - Foetal deaths of 20 or more weeks gestation.
	March to December 1994, 1995 to 1999 - The definition of Stillbirths under The Vital Statistics Act was changed on March 1, 1994 to mean foetal deaths of 500 grams or more.
Deaths	Excludes stillbirths.
Infant Deaths	Deaths under 1 year of age.
Neonatal Deaths	Deaths under 28 days (4 weeks) of age.
Perinatal Deaths	Foetal deaths of 20 or more weeks gestation (January and February 1994) or foetal deaths of 500 grams or more (March to December 1994, 1995 to 1999) plus infant deaths under 7 days (1 week) of age.
Natural Increase	Excess of births over deaths.

Rates (unless otherwise indicated, computed as follows)

Live Births	: per 1,000 population
Stillbirths	: per 1,000 live births
Marriages	: per 1,000 population
Divorces	: per 100,000 population
Natural Increase	: per 1,000 population

Causes of Death

All Causes : per 100,000 population
Infant : per 1,000 live births
Neonatal : per 1,000 live births
Perinatal : per 1,000 live births and stillbirths

Notes

1. Causes of death are classified according to the 9th (1975) Revision of the International Classification of Diseases, Injuries and Causes of Death, which was put into effect on January 1, 1979.

Introduction

The Vital Statistics Interim Report presents a concise record of those vital events, which occurred in Saskatchewan during the calendar year 1999. The Interim Report has been prepared in response to the requirements contained in The Tabling of Documents Act (1973).

The Vital Statistics Interim Report - 1999 records vital events by place of occurrence for 1999 (vital events which occurred in Saskatchewan in 1999). It includes for example, births to Saskatchewan residents who were in the province at the time of giving birth and residents of other provinces (or countries) who were in Saskatchewan at the time of giving birth. The data in this report are based on original registration forms and do not include amendments. The vital events recorded in this report for years previous to 1999 are by place of residence, unless otherwise indicated.

A. Population

1. The Historical Trend

The estimated population of 1,027,780 for 1999 is a very slight increase of 0.33 per cent over the 1998 estimated population of 1,024,387.

All other figures are final census.

2. The Percentage Distribution of the Total Population

During the past 30 years, the proportion of older people (65 years of age and over) has been increasing in Canada as a whole and in Saskatchewan. In Saskatchewan, however, the proportion of persons 65 years of age and over is greater than in Canada as a whole (14.5 percent and 12.4 percent respectively).

B. Births

1. Live Births

During the year 1999 a total of 12,481 live births occurred in the Province of Saskatchewan. This total includes births to Saskatchewan mothers residing in the Province of Saskatchewan at the time of giving birth and those births occurring to mothers who normally reside outside the province but who were in Saskatchewan at the time of giving birth.

The total of 12,481 live births represents a birth rate of 12.1 live births per 1,000 population, the same as last year's birth rate.

The 1997 live birth rates for Saskatchewan, for Canada, and for the Provinces are shown below for comparison.

2. Stillbirths

During the year 1999 a total of 72 stillbirths occurred in the province.

The definition of occurrence is given in the introduction. The 72 stillbirths occurred after 20 or more weeks gestation; 48 of the stillbirths occurred after 28 or more weeks gestation. These two totals represent rates of 5.8 and 3.8 stillbirths per 1,000 live births, respectively.

C. Deaths

During the year 1999 a total of 8,947 deaths occurred within the Province of Saskatchewan. This represents a crude death rate of 8.7 deaths per 1,000 population, which is slightly higher than the crude death rate experienced in 1998.

The 1997 crude death rates for Saskatchewan, for Canada, and for the provinces are shown in the table below for comparison.

Accidents and Violence

During the year 1999 a total of 422 deaths due to accidents occurred in the Province of Saskatchewan. This represents a rate of 41.1 deaths by accident per 100,000 population in 1999 as compared to a rate of 36.5 deaths by accident per 100,000 population in 1998.

The number of suicides, which occurred in Saskatchewan during 1999, was 113, a rate of 11.0 suicides per 100,000 population, the same number that occurred in 1998.

There were 12 homicides in Saskatchewan in 1999, a significant decrease from the 1998 number of 29 homicides.

D. Natural Increase in Population

In 1999 the natural increase was 3,534 and the estimated actual increase was 3,393 giving rates per 1,000 population of 3.4 and 3.3 respectively.

* See footnotes in Table 1.

E. Marriages

During the year 1999 a total of 5,900 marriages occurred in Saskatchewan. This total represents a rate of 5.7 marriages per 1,000 population. Marriage rates for Canada, the Provinces, and Saskatchewan for 1997 are given below for comparison.

F. Divorces

In 1999 a total of 2,230 divorces and annulments were registered under The Vital Statistics Act in Saskatchewan at the time of publication. This does not represent the total number of divorce petitions filed in 1999 since some petitions are not yet finalized.

G. Life Expectancy

A life expectancy table is, in effect, the history of mortality of 100,000 male babies and of 100,000 female babies born at the same time. Life expectancy figures provide a graphic picture of the extent to which the saving of lives has gradually prolonged the average expectation of life and are a fairly good reflection of the general health and survival conditions at the time of their compilation.

According to the Saskatchewan life table compiled on the basis of the 1996 census, the life expectancy at birth reached an all time peak for females, 81.30 years, and for males, 75.40 years. The gain in life expectancy is greater in females. A sharp rise in the probability of death begins at age 56 for males and at 65 for females. The decrease in life expectancy is greater for males than for females.

Note: Source of figures for 1941: Life Tables for Canada and Regions, 1941 and 1931, D.B.S. Ottawa 1947. These figures have been calculated for the prairie provinces. The figures for 1961 were calculated for Saskatchewan by the Department of Health. The figures for 1981 and 1991 were taken from the Statistics Canada publication, Life Tables, Canada and Provinces, 1980-1982 and 1995-97.

H. Adoptions

There were 293 adoptions registered in Saskatchewan during 1999, compared to 247 adoptions in 1998. The total of 293 adoptions registered includes out-of-province adoptions of persons born in Saskatchewan as well as adoptions in Saskatchewan of persons born elsewhere.

I. Legal Changes of Name

During 1999 a total of 753 legal changes of name were registered in Saskatchewan. This represents a slight increase from the 738 changes of name registered in 1998. The total of 753 does not reflect the number of persons who changed their name as each application may affect more than one person and in some cases, an entire family.
